

a Object and baseline

Question: which constraints move
null thresholds toward roads?

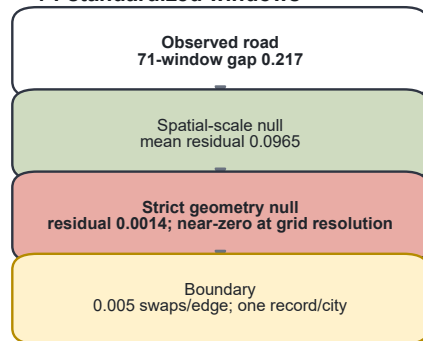

b

Formal null ladder 8 method-coherent cities

c

Full-city geometry screen 71 standardized windows

Allowed claim: a model-conditional null ladder separates degree, edge-scale and strict embedded-geometry baselines.
R68 provides full-city low-intensity coverage; R67 provides higher-intensity subset sensitivity.
Forbidden overclaim: not a universal planar theorem, causal urban-design rule or high-intensity all-city planar null.
